

Oskar Nordling

Software Developer for BnearIT AB

Oskar is a driven and competent software developer with a strong focus on Java. He has an ability to quickly learn new things and is always willing to challenge himself.

In his role, Oskar has been responsible for the development and integration of important subsystems, where he has had direct contact with end customers. This has given him a unique understanding of customers' needs and requirements, which has contributed to him always delivering high-quality solutions, even under great time pressure.

He also has a great passion for training and mentoring new colleagues.

His precision, determination, and ability to work in teams make him a highly valuable asset for any client.

Highlighted Work Experience

Software Developer

Saab | 2021 - Ongoing

Oskar is part of a team that is integrating a new data link from one of their customers. He is responsible for the development and integration of certain subsystems, including direct contact with the end customer during integration events. Oskar has also trained and acted as a mentor for new members of the team.

Software Developer

Saab

Saab in Luleå is developing the command and control systems for GlobalEye, an airborne early warning and control (AEW&C) platform.

Oskar is part of a team that is integrating a new data link from one of their customers. He is responsible for the development and integration of certain subsystems, including direct contact with the end customer during integration events. Oskar has also trained and acted as a mentor for new members of the team.

The development takes place in a Linux environment with Java as the programming language. Among the tools used are IntelliJ IDEA, Gradle, Git, Bitbucket, Jenkins, and Jira.

Aug 2020 - Nov 2021

Software Developer

Xolaris

Xolaris develops and sells software that uses mobile phone positioning to save lives.

Oskar has been part of a team developing a new product that acts as a "middleware" between external APIs and connected systems. As a software developer, he has implemented several major features in the complex product. The development has taken place in a Linux environment using Java, and has included technologies such as REST, EJB, JPA, and Angular.
